

OEKO-TEX® standard 100

Ensures safer, responsible textiles by certifying that products are free from harmful substances

By adhering to the OEKO-TEX® Standard 100, companies demonstrate their commitment to producing products that are free from harmful substances and contribute to safer consumer goods.

Protecting Consumer Health

The standard sets limits on the use of harmful chemicals and substances in textile products to safeguard consumer health.

Comprehensive Testing

Textiles and accessories are tested for a wide range of potentially harmful substances, including pesticides, heavy metals, formaldehyde, phthalates, and other chemical residues.

Independent Certification

The certification is conducted by independent OEKO-TEX® member institutes, which assess the compliance of textile products based on standardised criteria.

Global Recognition

OEKO-TEX® Standard 100 is recognised and accepted worldwide as a reliable label for safer and more sustainable textile products.

Annual Renewal

OEKO-TEX® certification is valid for one year, and manufacturers and suppliers must undergo annual retesting and renewal to maintain compliance.
